

Ability Test Report

This Ability Test Report provides the scores from Test Candidate2's Verify Ability Tests. If these tests were unsupervised, there is a small possibility that these scores do not represent their actual level of ability.

Level: Appropriate for all job levels

Language: English - International

Percentile compared to the General Ability Screen General Population (INT) 2015 comparison group

Test Candidate2 demonstrates well below average cognitive ability compared to the comparison group. The candidate's result is better than 9% of the people in this group. This individual is likely to have great difficulty solving simple mathematical problems, even with the use of a calculator. This person may have problems following logic when making arguments or following the arguments of others. The is likely to have trouble thinking creatively and may be prone to missing problems as they arise.

Guidelines for using these results

How to verify a result

There are many ways to confirm an individual's ability level. Some techniques are listed below:

Consider information from other competency assessments	Use results from other assessments that relate to the competencies and/or skills important for performance in the job to evaluate the person's actual ability level. For example work simulations, or assessment centres.
Use information from other sources	Results from examinations, qualifications, grades and other attainment tests that are appropriate measures of a person's cognitive ability may help to evaluate the person's actual ability level.
Use structured interviewing techniques to probe related competencies	Competencies related to cognitive ability include: <ul style="list-style-type: none">• Presenting & Communicating Information• Writing & Reporting• Applying Expertise & Technology• Analysing• Learning & Researching• Creating & Innovating• Formulating Strategies & Concepts

The final decision on how to confirm and use the person's test results should follow internal policies and guidelines. Companies should evaluate the risks involved, corporate policy/governance, the use of other screening and selection tools, time, cost and other factors. All of these may be important when deciding the most appropriate method to verify an individual's Ability Test results.

Information about this report

How to interpret this information

- The **bar chart** displays the individual's percentile score from the Ability Test.
- The **comparison group** identifies the specific group of people this person's score is compared against.
- The **percentile score** indicates how well this person scored against the people in the comparison group.
- For example, a percentile score of 50 means that the individual performed better than 50% of the people in the comparison group.

About cognitive ability tests

Cognitive ability is the most effective, single predictor of future performance in many different jobs. However, many other factors also play an important role in predicting job performance. The information in this document should be used as part of a broader evaluation of this person's suitability and potential for the job.

More Information

Additional information and guidance on how to use the SHL Verify range of Ability Tests is available online at SHL.com.

Technical information

T-scores and Sten scores are provided for users who are trained in their appropriate use and interpretation.

A T-score is a standardised test score with a mean of 50 and a standard deviation of 10. The Sten score is a standardised score on a 10-point scale. It has a mean of 5.5 and a standard deviation of 2.

The Report also includes information to give you an indication of the candidate's accuracy while completing the test. 'Number Attempted' refers to the number of questions the candidate has seen during the test. The total may include questions that the candidate has not provided a response to.

Work rate provides a measure of how far the candidate has got through the test, and is the number attempted divided by the total number of questions in the test. This is expressed both as a percentage and as raw data.

Hit rate provides a measure of accuracy, and is the number of questions the candidate has answered correctly divided by the total number of questions attempted. This is expressed both as a percentage and as raw data.

Work rate and Hit rate provide measures of the number attempted and number answered correctly. More information on these measures is provided in the Verify User Guide. It is important to understand that because each candidate receives a different set of items, there is not a direct correlation between Hit rate/Accuracy and the Percentile, T or Sten score achieved; and individual with a lower hit rate may achieve a higher percentile score and vice-versa.
